

6.2 Engage with systems utilizing evidence-based practice strategies:

In working on the in-patient order for my patient this week, I interacted with the on-call physician, the nurse on the unit, the mother who came in with them, and the LCSWs who were guiding my interactions. I also called an insurance company and worked on a pre-certification on behalf of the patient. Each of these systems work in concert with one another in order to provide evidence-based care for the patient in a coordinated way. 🔒
