

sum, he ended up having bleeding on the brain, and it was beneficial for us to refer him out to the hospital prior to any detox consideration. ■

8.1 Implement evidence-based interventions with individuals, families, and/or groups:

In accordance with our policies at this facility, if a patient presents with obvious signs of physical distress, they need to be medically cleared before we conduct an assessment. I relied on that guidance (along with the team guiding me) in determining that a medical clearance needed to be implemented prior to any considerations of mental health assessment or admission. 🔒

9.1 Select evidence-based evaluation strategies with specific client systems:
