I demonstrated Competency 1.2 and Competency 2.3 by identifying different biases that could affect me working with different groups and different populations. One bias that I identified is that it would be hard for me to work with individuals who hurt or have hurt animals. I am a huge animal lover and tend to seriously dislike anyone that has ever intentionally hurt an animal. Another bias that I recognized was that it can be hard for me to work with men. I sometimes get uncomfortable and uneasy around men which can make it difficult to work with them sometimes. I have discussed with my field instructor ways to maintain professionalism when working with these populations.
